

John “J.D.” Krasnick

jdkrasnick@gmail.com | jdkrasnick.com | github.com/JDKrasnick | linkedin.com/in/jdkrasnick | 610-585-7325 | Wayne, PA

EDUCATION

Cornell University | GPA: 3.56/4.0 | SAT: 1590 Ithaca, NY
Bachelor of Science in Operations Research and Engineering, College of Engineering August 2025 – May 2029
Relevant Coursework: Foundations of Machine Learning, Advanced Topics in ML: Generative AI (graduate), Optimization I, Linear Algebra, Object-Oriented Design and Data Structures (Honors), Functional Programming
Episcopal Academy, High School Diploma, May 2025 | **Awards:** Two-time AIME Qualifier Wayne, PA

EXPERIENCE

Order.co New York, NY
AI Engineer Intern May 2026 – August 2026

- Hardened a Firecrawl-based product-data scraper processing **5,000+ pages daily** across hundreds of vendors, lifting recovery on blocked URLs from **0% to 82.7%** and pipeline success above 98%
- Designed offline evals for live offers that raised core product field accuracy from **87% to 95%**
- Shipped an inline **LLM-as-a-judge** eval sampling **10%** of live parses, with per-field Snowflake dashboards used by the Product team
- Built an **agentic DOM-interaction flow** (Pydantic AI, Browserbase) that sets delivery zip codes on vendor pages at a **90%+** completion rate, unlocking location-gated pricing for approximately 80% of vendors

Generative AI at Cornell Ithaca, NY
AI Engineer February 2026 – Present

- Engineered a **vector-backed LLM** pipeline (TypeScript, GPT-4o) scoring credit and covenant impact of **Investcorp** events
- Architected a **BullMQ/Redis** ingestion pipeline that discovers, dedupes, and scrapes news from **14+** providers into a clustered Postgres/pgvector event model

Cornell FinTech Club Ithaca, NY
Financial Software Engineer January 2026 – Present

- Deployed a **full-stack credit lending platform** (Next.js, FastAPI, PostgreSQL) spanning intake, underwriting, and servicing
- Built the **ML credit-decisioning engine** behind approval and pricing using logistic regression and gradient boosting

RESEARCH

Cornell University, Operations Research & Information Engineering Ithaca, NY
Undergraduate Researcher, advised by Professor Jim Dai January 2026 – Present

- Implemented **PPO (PyTorch, OpenAI Gym)** to learn routing and scheduling policies for multiclass queueing networks
- Developed a web-based **discrete-event simulator** (FastAPI, WebSockets) with pluggable scheduling policies and Gym-style RL environments, validated against M/M/1 and M/M/c closed-form results

TECHNICAL SKILLS

Languages: Python, Java, SQL, C++, TypeScript

Machine Learning & AI: PyTorch, JAX, Scikit-learn, Hugging Face, NumPy, Pandas, LLM Agents & Evals

Backend & Cloud: FastAPI, Node.js, PostgreSQL, ChromaDB, AWS (Lambda, S3, ECS), Docker, Snowflake, Git

PROJECTS

Agent Arena, Adversarial Coding-Agent Eval Harness (TypeScript, Node.js)

- Built an eval harness pitting frontier coding agents (**Claude Code, Codex, Gemini CLI**) against each other in attack-repair rounds of executable Vitest patches, surfacing undetected defects across **20+** PR-defense matches
- Coordinated rounds via **Zod-typed evidence handoffs**, **Git worktree** isolation, and a context-efficiency benchmark

Lead Surfacer, Discovery & Enrichment Pipeline (Python, TypeScript, FastAPI, Next.js, SQLite)

- Delivered a lead-discovery pipeline **used daily** by the client’s marketing lead, combining multi-source domain collection, batched **LLM classification**, deduplication, and targeted crawling
- Served results through a FastAPI worker and Next.js dashboard as a reviewable queue of scored, enriched leads
